                                                                                                  \int_{-\infty}^{\infty} e^{-2ly^{-}x} dy = \int_{-\infty}^{x} e^{-2l(-ly^{-}x)} dy + \int_{-\infty}^{\infty} e^{-2l(y^{-}x)} dy
= \int_{-\infty}^{x} e^{2l(y^{-}x)} dy + \int_{-\infty}^{\infty} e^{-2l(y^{-}x)} dy
= e^{-2x} \int_{-\infty}^{\infty} e^{2y} dy + e^{2x} \int_{-\infty}^{\infty} e^{2y} dy
= e^{-2x} \left[ \frac{e^{2y}}{2} \right]_{-\infty}^{\infty} + e^{2x} \left[ -\frac{e^{2y}}{2} \right]_{-\infty}^{\infty}
= e^{-2x} \left[ \frac{e^{2y}}{2} - 0 \right] + e^{2x} \left( 0 + \frac{e^{-2x}}{2} \right)
al= los for fxx(xy) dx dy
     = c f e | x | e - 2 | y - x | dy dx

= c f e | x | f e - 2 | y - x | dy dx

= c f e | x | dx
      = C(\int_{-\infty}^{0} e^{x} dx + \int_{0}^{\infty} e^{-x} dx)
= C([e^{x}]_{-\infty}^{0} + [-e^{-x}]_{0}^{\infty})
= C((|-0|) + (0 - (-1))
      = c(2)
   => 1=20
        => C= ==
                                                                                        f_{x}(x) = \int_{-\infty}^{\infty} f_{x,y}(x,y) dy
  b) frix(y/x) = fxr(xy)
                                                                                                       1 e-1x1-21y-x1
                                        2 e-1x1
                                          -21y-x1
    c) U~Exp(2) RVV, P(V=-1)=P(V=1)== ULV Z=x+UV
      P(Z < z) = P(x+ UV = 2)
                             = P(UV < z-x)
                             = \binom{V}{V} = \frac{2-x}{V}
                             = 1 - e^{-2\left(\frac{z-x}{v}\right)}

\frac{\rho(Z \leq z) = \rho(Z \leq z | V^2|) \rho(V = 1) + \rho(Z \leq z | V = -1) \rho(V^2 = 1)}{= (1 - e^{2(Z - x)}) \frac{1}{2} + (1 - e^{2(Z - x)}) \frac{1}{2}}

= | - (e^{-2(z - x)} + e^{2(z - x)}) \frac{1}{2}

      \frac{d}{dz}(P(Z = z)) = \frac{d}{dz}([-(e^{-2(z-x)} + e^{2(z-x)}))]_{2}^{\frac{1}{2}}
= e^{-2(z-x)} + e^{2(z-x)}
     Ne know Z=x if V=1 and Z=x if V=-1
So PDF of Z = e-21z-x1, the same dist as b)
```
